

WATER RETROFITS

It's easy to save water,
especially when it's free!

Low-flow Shower Head

A self-cleaning, easy-to-install shower head featuring a non-aerating spray, which means less temperature loss and big savings on hot water.

Toilet Leak Detection Tablets

Your toilet might be silently leaking away dollars every month. Use dye tablets to discover water-wasting leaks.

Toilet Flapper

Over time, flappers decay and minerals build up causing leaks. Replacing the flapper is an easy way to save water.

Kitchen Faucet Aerator

This aerator swivels to direct water flow where it's needed and provides two spray options. The pause lever allows you to attain the perfect water temperature and stop the flow while you work.

Bathroom Faucet Aerator

By introducing air into the water stream, the aerator provides an even spray pattern while saving water and reducing splash.

Rain Gauge

Adjust your outdoor irrigation schedule according to the season and consider recent rainfall. A rain gauge is easy to install and fun to use!

Pick up retrofit items from 8am - 5pm Monday through Friday at
Customer and Utility Services, Plano Municipal Center, 1520 K Ave., Plano 75074.
