2010 to Present

The following is a summary of data collected during Service Day events in our Love Where You Live neighborhoods. Service Days happen twice a year - once in the spring, and once in the fall. Our volunteers come from all across the metroplex, offering their time, tools, and materials to minor home repairs and neighborhood cleanup, becoming a huge support to our Plano families. The program gives residents hope for the future and allows them to continue to love where they live.

To volunteer or learn more, contact a Neighborhood Planner at 972-208-8150.

Number of Volunteers

8,965

The Love Where You Live program is fortunate to benefit from a huge partnership base of volunteers that include non-profits, faith based organizations, schools, colleges, social service organizations, businesses, and corporates. Volunteers work on minor home repairs and neighborhood wide initiatives.

Volunteer Hours

42,541 hrs

The Love Where You Live program would not exist if not for the selfless efforts of our volunteers. Putting in over 40,000 hours of volunteer time into our projects, they have essentially invested \$824,513 of labor into our Plano neighborhoods!

Landscape Debris

195 Tons

The majority of our Love Where You Live neighborhoods are within our older communities in Plano. With aging communities, we see older homes and older trees. Thanks to the program, health and safety issues of overgrown and/or dead trees were addressed.

Trash

1132 Tons

Picking up litter and trash are simple yet highly effective ways to beautify a neighborhood. Over the years, our volunteers have picked up litter and trash in neighborhoods, parks and creeks, as well as helped residents remove trash and even small structures from their premises.

Number of Homes

452 Homes

Helping residents with minor home repairs is a large part of the Love Where You Live program. In many cases, residents have difficulty maintaining their homes due to physical or financial issues, or are dealing with other personal hardships and challenges. Repairs are caught before they become health and safety issues to residents.
